I suppose you could use an old computer mouse and press on one of the buttons
to tap out code. You might have to remove any mouse electronics and wire
directly to the button switch contacts to get it to work. Might be easier
on your hand and fingers.

>have a ticket if you order one.

Years and years ago, Sears carried both a synthesized and a crystal-controlled 2M mobile radio. Looked JUST like a CB, down to having 23 "channels" on the frequency switch (the xtal-bound unit, that is). SO many CBERs bought them that two meters here became a wreck. In fact, it appears to be the cause of a "nonstandard" operating mode in the Chicago area; if one wants to break into a conversation, the convention is not to say "break", it's to sign with your call. This was to make sure the breaker HAD a call.

Expect much more of the same, and much worse, as these units hit the market.

Oh, I don't know. Abuse and intimidation are abuse and intimidation, whether in drug testing, copyright law or whatever. If it's corporate policy to abuse and intimidate, it's at least marginally topical.

As a CONSULTANT to Motorola a while back, in order to get a pass to enter the building, they wanted me to sign an invention agreement! I refused and simply went to the guard desk every day and signed in as a guest instead.

If they want me, as a consultant, to assign any and all inventions I come up with to them, then let them pay me my rate for 24 hours a day, 7 days a week commencing with the time I first worked in the industry and ending with the termination of the agreement. Otherwise, they get the work I do for them while they're paying me.

This was IMHO simple intimidation, because such matters were covered in the contract they signed with the consulting house I was working for at the time.

I feel it's topical because a trend seems to be emerging here; they seem to have the attitude that they own everything and everyone they come in contact with.

I've had my Kenwood 741 mounted in my Saturn SC2 for the past 6 months with no problems at all. It puts out 50 watts max., and I have yet to discover a problem with any of the electronic equipment that came stock or as an option in the car. Similarly, no problems on 440 either. Good luck!

Subject: Re: Motorola Ad Oct QST

For those of you that have read the ad on page 161 of the Oct 93 QST and are puzzled by its intent, I would suggest that you make the call to the listed 800 number and ask for Mr. Tony Beill. This gentleman will be more than glad to convey Motorola's intention behind this ad.

Mr Beill heads Motorola's product security division and of course will have all the answers for your questions.

John...N1NRA

Some years ago, in northern New Jersey, at a field day site at the local community college, some of us were going to use an aluminium ladder as a mast. We strap on an antenna, and instead of using people pulling on ropes to raise it, someone uses their van. With 3 of 4 guy ropes already installed on the ladder/tower, guess what happened when the van went a little too far with the 4th guy line/rope tied to its bumper? Ladder twisted up like a pretzel. :-(
